

SBRGC.ARC2

Rifle and Pistol

This match is designed to help you develop modern defensive rifle skills with general purpose rifles such as the AR-15. With this goal in mind, you need to make sure that your equipment is functioning properly before coming to the match. Make sure your rifle/ammunition combination cycle properly, your sights are working and calibrated for 100 yd. zero, (recommended), magazines install securely and drop free when released, slings mounted securely and placed for effective use, fore-grips, bi-pods, etc., properly and firmly mounted. More specifically, the rifle you use must be:

- semi-automatic
- detachable box fed magazines (4 minimum; 10 round capacity)
- any sight system
- properly functioning safety
- sling
- bolt must remain open when unloaded and clear

Rifles that are finicky and prone to functional difficulties should be avoided, as they will hinder the intended training purpose of this match. Remember, our purpose is to learn how to run the system, not to diagnose why it won't work properly.

Your rifle does not have to be an AR-15 type, but could be one of many other semi-auto, box fed magazine rifles such as: M1 Carbine, AK 47, M1A, Ruger 10/22, Mini-14, Mini-30...etc.

PISTOL: The transition to pistol portion of the first two stages (7 and 15 yds) will require the use of a full size semi-auto pistol, a holster in which to carry it, and two magazines. The pistol may be any caliber and type. The holster must be of rigid materials that retain its shape and position when the pistol is withdrawn. It must completely cover the trigger guard, and mount on the shooters firing side hip. No cross-draw or chest rig holsters are allowed.

Ammunition: Rifle- 100 rounds (83 for the match), Pistol- 25 rounds (22 for the match)

There will be somewhere between 15 and 20 magazine cycles (in and out), so an efficient system for assisting those mag. changes will be helpful for bullet button equipped guns. One such system, by Thordson Customs, <http://www.thordsencustoms.com/shop/ULTIMATE-BULLET-BUTTON-TOOL-UBBT/SELF-INSTALL-KITS.htm>, is about as good as you can get. Take a look.
